INNOTECH SYSTEMS SUPPLIES OEM REMOTE CONTROLS TO BOSTON ACOUSTICS *Custom Remote Control Essential Element of SoundBar Cinema Home Theater System*

Port Jefferson, New York—Innotech Systems Inc. (ISI) today disclosed that their ISI101 Customizable Remote Control has been incorporated into Boston Acoustics' innovative SoundBar Cinema Home Theater System. The remote control provides all the capabilities necessary to control the SoundBar Cinema Home Theater as well as the associated television set. The SoundBar Cinema was introduced at the Consumer Electronics Show (CES) earlier this year in Las Vegas.

The first truly high-performance self-contained home theater sound system to eliminate the complexity of conventional home theater systems, the SoundBar system was extremely well received at the show. The SoundBar module includes the left, center and right speakers in a single sleek enclosure designed to fit on top of a 27" TV set. The SoundBar module includes the system's electronics — a state-of-the-art all digital Dolby® Pro Logic® decoder, multi-channel, actively-equalized power amplifier, and QSound® image enhancement technology. This innovative design replaces the three separate front speakers and the receiver/decoder found in conventional systems. A powered sub-woofer completed the system.

“Ease-of-use and high-performance were the two driving forces behind the design of the SoundBar,” stated Moses Gabbay, Vice President of Engineering at Boston Acoustics. “To do this, we needed a remote control supplier who could work with us to create a simple remote, provide a comprehensive library of television control codes for North America, Europe and Asia, and also provide Boston Acoustics with its own unique controls.”

“Boston Acoustics has earned a worldwide reputation for designing and manufacturing exceptional sound systems,” added Len Novara, president of Innotech Systems. “I am delighted that they have selected Innotech to be their supplier of remote control technology.”

- more -

The ISI101 Customizable Remote Control is an easily customized system which can be easily adopted to consumer and industrial applications. OEM users of the remote control can draw upon the comprehensive Innotech library of consumer home theater remote control codes, or define your own proprietary key codes, draw from the comprehensive Innotech Systems remote control library of entertainment system codes, or combine both for applications such as home theater. The appearance of each design is unique, through the use of an easily modified overlay and keypad. The remote control accommodates designs of up to 64 keys.

Innotech Systems Inc.

Founded in 1991, ISI maintains two facilities, conveniently located in Boston and suburban New York City. The Boston design center specializes in ASIC design and development, while the New York location specializes in full system design, full-custom IC design and has particular expertise in infrared remote control technology. More than 500,000 remote controls designed by Innotech Systems are in households around the world. In addition to licensing the code library, Innotech designs and manufactures OEM remote control transmitters and receivers for some of the world's leading companies.
